# Autonomous *iot*

A UK company based in North Lanarkshire, Scotland, working in the Renewable Energy Sector focusing on ways to become more energy efficient and reduce our overall carbon footprint

## Our Mission

To create leading edge reusable energy solutions that solve customer problems

## Our Solution

Our first product to market is our internally designed Smart Street-light platform.

Managed by our own Intellectual Property Smart Controller, powered by Batteries which are recharged by solar and wind energy. Our new product has a unique in-house design enclosure to maximise air flow and optimise sun capture and is monitored by our Dashboard which can be personalised to customer needs.

## Value Proposition

Traditional external lighting installations in the UK are grid connected and consume a major amount of energy.

Our **Value Proposition** is to offer a **cost-effective alternative that is off-grid, always available, efficient and using technology that helps reduce our carbon footprint**. It uses reusable, energy efficient technology, powered by hybrid wind and solar, is remotely manageable and aesthetically pleasing.

Intelligent Hybrid Technology From Autonomous *iot*

**Autonomous**   
Creating The Future

**Autonomous**   
Creating The Future

Solar panel designed for optimum sun capture  
can be rotated south per site location

Ergonomically designed  
enclosure for maximum  
wind capture

Fan

Bottom  
compartment  
holds components,  
photosensor &  
LEDs

PIR

Wind Turbine  
Motor and  
Support Column

LEDs

Lamp pole base contains a  
water sealed compartment  
with batteries and controller

Intellectual  
Property  
Designed in the  
UK

## Commercial Lighting

### Value Proposition

Off-Grid Smart Lighting, cost saving, energy efficient, carbon reducing  
Intelligent Lighting with hybrid wind and solar reusable energy

## Surveillance

- Rapid Deployment Security Tower
- High definition CCTV

## Analytics

Monitoring pollution, speed etc. using intelligent sensors

## Communication

Wireless, SIM, 5G devices

## Smart City

- Internet of Things in a Smart City
- Smart parking

## Emergency Alert

Help Points/ Early warning system

## Natural Disasters

Off-grid Emergency lighting and power in event of natural disasters (floods, earthquakes, Covid-19)

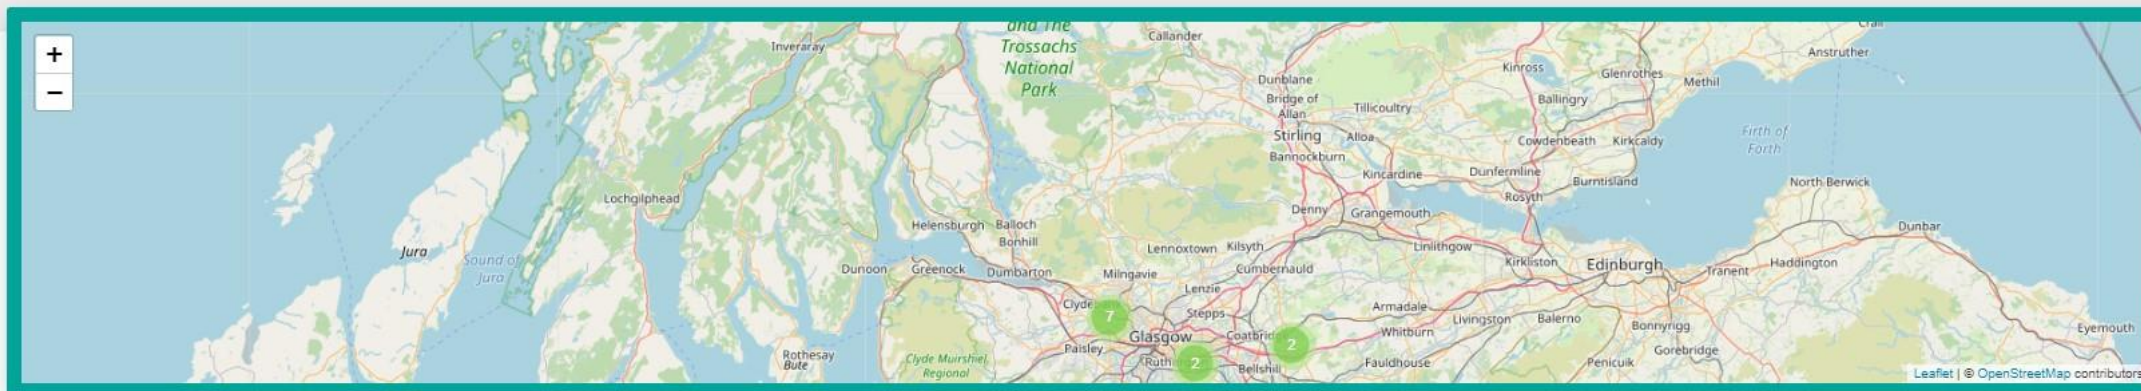

## Utility Power

Supplemental Power using meshing technology and intelligent management software
